

flashCube

Emergency Flasher & Campsite Illumination

Keep a flashCube handy for those unexpected roadside emergencies!

For 5th Wheel and Travel Trailers with a 7-Pin Umbilical Cord.

What is the flashCube?

The flashCube is an inexpensive and easy to use accessory that provides emergency flashers and campsite illumination to 5th wheel and travel trailers. The flashCube is less than 5" in all directions and weighs less than 1 pound so it should easily find a home in your RV's basement or storage cabinets.

Why do I need the flashCube?

If you've ever had to leave your 5th wheel or travel trailer on the side of the road because of a mechanical breakdown, you know that your trailer has no emergency flashers once the tow vehicle has been disconnected. Without emergency flashers to warn oncoming traffic, your trailer is an accident waiting to happen. The situation gets even worse at night when your trailer may not be seen until it's too late.

With the flashCube, you can have emergency flashers on your 5th wheel or travel trailer even when your tow vehicle is disconnected. The flashCube helps to insure that your trailer will be easily seen by other motorists while you are away seeking help.

The flashCube also provides campsite illumination by operating your trailer's running lights while you are camping. Your trailers running lights will softly illuminate your campsite. No more banged up legs or knocks on your head. No more stumbling around in the dark.

The flashCube should be a part of every 5th wheel or travel trailer owners toolkit.
